The System is the Resume:
An Architected Digital Identity

THE PROBLEM WITH STANDARD PORTFOLIOS

Standard portfolios are insufficient for systems-level work.

The conventional landing page showcase presents projects as a disconnected grid, falling to represent the relationships between them.

A Disconnected View: This traditional approach cannot effectively demonstrate the underlying architecture of a body of work or the creator's systems thinking capabilities.

The Goal: A Cohesive Artifact

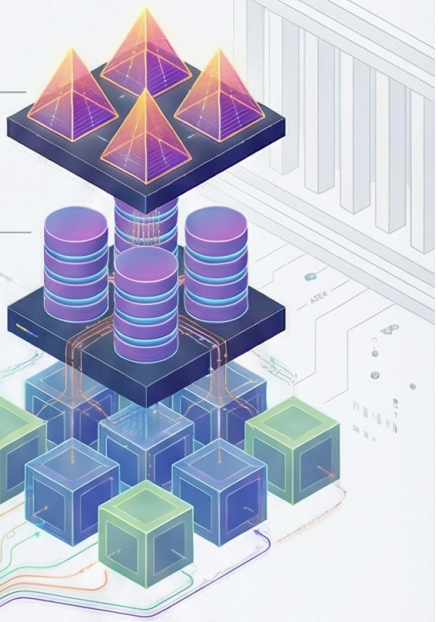

To move beyond a simple list of projects to a single artifact that is both the showcase and a demonstration of the skill itself.

THE SOLUTION: AN INTERACTIVE 3D ECOSYSTEM

Introducing the Topology Palace

An interactive, tiered 3D navigation system that unifies a portfolio into a cohesive digital identity.

An Architected Blueprint: The system organizes projects into a three-tier taxonomy, using geometric shapes to represent different levels of work.

APEX [1-3]:
Strategic Entry Points
Primary professional portals and They are represented by pyramid geometry.

CORE [4-9]:
Flagship Systems
These are major projects and interactive applications that demonstrate core competencies. They are represented by cylinder geometry.

FOUNDATION [10+]:
Modules & Primitives
These are foundational projects, educational modules, and technical deep dives. They are represented by cube geometry.

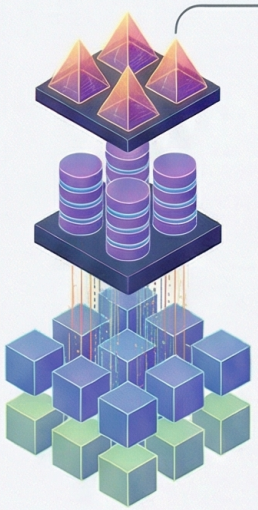

UNIFIED DATA MODEL (JSON)

Governed by a Unified Data Model

Every project (or "node") contains rich metadata, status, and clear navigation, all driven by a single source of truth.

TWO VIEWS FROM ONE DATA MODEL

CATHEDRAL
Mode: The Hierarchy View
A vertical, totem-like stack where tiers are aligned along the Y-asis to emphasize the filerarchical structure.

Analogy: A modular telescope extended uptright.

Powered by a Single Source of Truth

A centralized JSON data object drives both the 3D visualization and a 2D fallback, ensuring consistency across both layouts.

PALACE
Mode: The Ecosystem View
An expanded, concentrie-ring layout that functions as a "xity map" to emphastre relationships across the entire ecosystem.

Analogy: Telescope components laid out on a table.

THE SYSTEM IS THE RESUME

The system itself is a direct demonstration of the creator's skills.

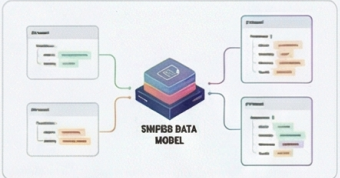

The features of the Topology Palace directly map to the technical abilities required to build complex, reliable systems.

Cohesive Ecosystem -> Systems Integration
Integrating disparate projects into a ueified system demonstrates expertive in systems integration.

Real-Time 3D Interface -• Performance Optimization
Building a recounsive and performent 3D interface showcases skills in performance and hardware-aware optimization.

Consistent Data Structure -> Data Modeling
Creating a centralized data structure that drives multiple views proves eapability to data modeling and architestore.
